## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 are drawn to methods of mass spectroscopy, classified in class 422, subclass 62.
- II. Claims 15-52 are drawn to methods of detecting nucleic acids, classified in class 435, subclass 6.
- III. Claims 53-56 are drawn to kits, classified in class 438, subclass 10.

The invention of group I, and the invention of group II are unrelated. Inventions are unrelated if it can be shown that they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of group II requires the use of micro arrays for detection, while the invention of group I use mass spectroscopy therefore each invention requiring a distinct set of intermediates, procedures, and equipment, creating and resulting in divergent modes of operations.

The invention of group III, and the invention of groups I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the surface bound oligonucleotides, oligonucleotide anchors, bifunctional linkers, nucleases, and protective agents of group III may be used in hybridization methods, purification methods, transcription or cloning methods without the methods of

Art Unit: 1637

group II and may also be used with atomic absorption, immunoassays, immunochromatraphy or optical methods without the use of mass spectroscopy of group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Further, because these inventions are distinct for the reasons given above and the search required for the methods of group I is not required for group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Nancy Axelrod on 9/13/2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
